

Powder Metallurgy

Gerotor Components

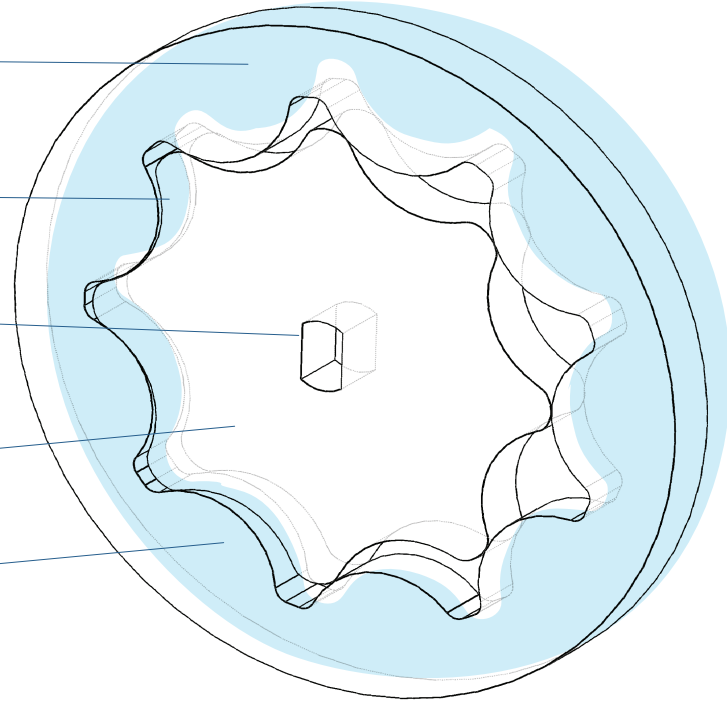

Top and bottom surfaces ground to +/- 0.003mm

Machined ID/OD where required

Key ways, splines and other drive geometries possible

Excellent part to part repeatability

Precision forms comes directly from the Powder Metallurgy process

Powder Metallurgy Benefits

- Tighter tolerances for better efficiency, pressing net shape with little material removal to finish
- Dies can accommodate family of parts, if there are different lengths to support. This can provide a more economical approach, lower tooling investment
- Gerotor components provide better wear resistance, runs quieter, tight tolerances off the press
- Pressure range up to 1,000 PSI
